

One control plane for **all of AI.**

Govern, observe, and budget **every** AI vendor
and agent platform from one tower — natively
where they allow it, enforced where they don't,
and monitored where neither is possible.

OpenAI · Anthropic · Google · AWS · Azure · Microsoft · Mistral · Cohere · Meta · Databricks · IBM · Groq ·
Together · Perplexity · GitHub Copilot · xAI — one policy, one ledger, one audit trail.

COVERAGE

01 Every vendor. One honest model.

Microsoft 365

 VendorNative

Drive the vendor's own admin API.

 EnvManaged

Push managed config into the environment.

 ProxyEnforced

Optional inline gateway, off by default.

 MonitorOnly

Verify & alert — never faked as enforced.

Native where they allow it. **Enforced** where they don't. **Monitored** — never faked — where neither is possible.

POLICY

02

ONE TOWER, THREE JOBS

Safety. Visibility. Budget.

GOVERN

Safety & governance

Pick a rigor level per surface — we apply it to every vendor, natively or via managed config.

Standard

Elevated

Strict

SaaS Fintech Healthcare

One-click industry baselines — then fine-tune anything.

OBSERVE

Visibility

One normalized stream — model calls, agent actions, audit & drift, every vendor. SIEM- & OTel-ready.

A

CONTROL

Budget & spend

One ledger across every vendor; soft caps alert, hard caps stop overspend — even where the vendor has none.

Set the posture once; Air-Traffic applies it across all 16 — and shows you **exactly how** each control is enforced.
